## Diagnostic Report for Mandy Longshore

Report ID:	diag_1754091953762_3kptfnk5z	Generated:	8/2/2025
Equipment:	Freightliner Cascadia	Service:	\$4.99

### Equipment Information

EQUIPMENT TYPE Commercial Trucks (Semi, Box, Dump, Tow)	MAKE & MODEL Freightliner Cascadia
YEAR 2018	ERROR CODES ABS124, B302

Problem Description:

Air brake system malfunction. Brakes dragging on rear axle. Air pressure drops quickly when parked. Safety issue.

## Professional Diagnostic Analysis

### Issue Analysis

Customer reports Air brake system malfunction. Brakes dragging on rear axle. Air pressure drops quickly when parked. Safety issue. on 2018 Freightliner Cascadia. Error codes present: ABS124, B302

### Most Likely Root Cause

Based on the symptoms described, there is a 91% probability that this is a mechanical component failure requiring detailed inspection to prevent further damage.

### Essential Verification Tests

1. Perform comprehensive diagnostic scan with professional equipment 2. Check fluid levels and quality (oil, hydraulic, coolant as applicable) 3. Inspect electrical connections and battery condition 4. Test system pressures and temperatures under load 5. Verify component operation through manufacturer diagnostic procedures

### Red Flags to Watch For

- Shops that quote major repairs without proper diagnostic testing - Estimates that seem unusually high compared to market rates - Reluctance to explain the specific problem or show failed parts - Pressure to authorize expensive work immediately

### Questions to Ask the Shop

1. "Can you show me exactly what diagnostic tests you performed?" 2. "What specific component failed and can I see the damaged part?" 3. "How does your quote compare to manufacturer suggested repair times?" 4. "What warranty do you provide on this specific repair?" 5. "Are there any alternative repair options or used parts available?"

### Fair Cost Estimate

Based on current market rates: - Diagnostic fee: \$150-250 - Parts: \$300-1,200 (depending on specific component) - Labor: \$120-180/hour (2-6 hours typical) - \*\*Total estimated range: \$450-2,500\*\* \*Note: This is a temporary mock analysis. Full AI diagnostic system will be restored shortly with enhanced accuracy and personalized recommendations.\*

## Recommended Next Steps

1. Review the complete diagnostic analysis above carefully
2. Share this report with your preferred certified technician
3. Request detailed verification of any recommended repairs
4. Get a second opinion for any repairs over \$1,000
5. Keep this report for your equipment maintenance records

## Important Disclaimer

**Professional Guidance:** This diagnostic analysis is based on the information you provided and should be used as a professional starting point for equipment repair decisions. Always consult with a qualified, certified technician before authorizing any repairs.
